

Product Description

The zws sensor offers a non-contact measurement of the distance to an object which must be positioned within the sensor's detection zone. The switched output is set in dependence of the adjusted detect distance.

Via the push-button, the detect distance and operating mode can be adjusted (teach-in). Two LEDs indicate operation and the state of the switched output.

Operating Instructions

Ultrasonic proximity switch with one switched output

- zws-15/CD/QS zws-15/CE/QS
- zws-24/CD/QS zws-24/CE/QS
- zws-25/CD/QS zws-25/CE/QS
- zws-35/CD/QS zws-35/CE/QS
- zws-70/CD/QS zws-70/CE/QS

Safety Notes

- Read the operating instructions prior to start-up.
- Connection, installation and adjustment works may only be carried out by skilled personnel.
- No safety component in accordance with the EU Machine Directive

Proper use

zws ultrasonic sensors are used for non-contact detection of objects.

Fig. 1: Attachment with mounting plate

Installation

- Mount the sensor at the installation site with the aid of the enclosed mounting plate, s. Fig. 1. Maximum torque: 0,5 Nm
- Connect a connection cable to the M8 device plug, s. fig. 2.
- Avoid mechanical load on the connector.

Fig. 2: Pin assignment with view onto sensor plug and colour coding of the microsonic connection cable

Start-Up

- Connect the power supply.
- Carry out the adjustment in accordance with the diagram.

Factory Setting

- Operation with one detect point
- Switched output on NOC
- Detect points at operating range

Operating modes

Three operating modes are available for the switched output:

- Operation with one detect point
The switched output is set if the object falls below the set detect point.
- Window mode
The switched output is set if the object is within the set window margins.
- Two-way reflective barrier
The switched output is set if the object is between sensor and reflector.

Synchronization

You can synchronize as many sensors as you like.

- Apply a square-wave signal to the sync-input with pulse width t_i and repetition rate t_p (see fig. 3 and technical data).

Any amount of sensors may be synchronized with this external synchro-

nisation signal. A high level on sync-input will deactivate the sensor.

Fig. 3: External synchronization signal

Fig. 4: Minimum assembly distances

Checking operation mode

- In normal mode shortly press the push-button.

The green LED stops shining for one second, then it will show the current operating mode:

- 1 x flashing = operation with one switching point
- 2 x flashing = window mode
- 3 x flashing = reflective barrier

After a break of 3 s the green LED shows the output function:

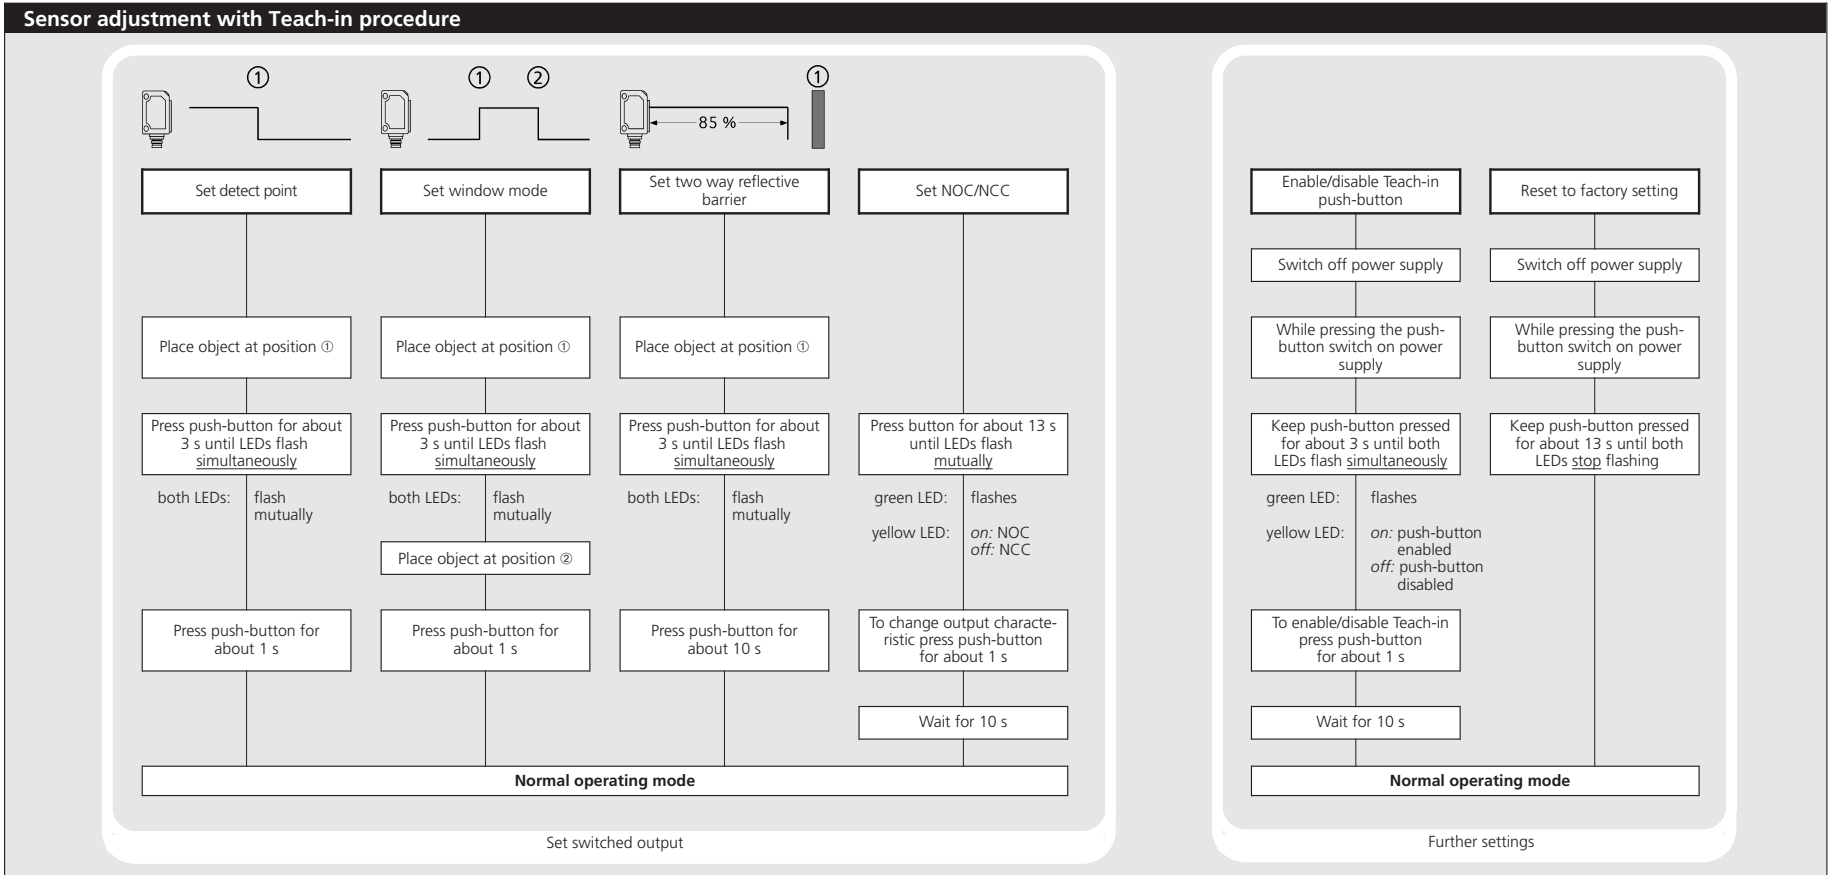

- 1 x flashing = NOC
- 2 x flashing = NCC

Maintenance

microsonic sensors are maintenance-free. In case of excess caked-on dirt we recommend cleaning the white sensor surface.

Notes

- The zws sensor has a blind zone, within which distance measurements are not possible.
- In the normal operating mode, an illuminated yellow LED signals the switched output is switched through.
- The standard sensor has no temperature compensation.
- If the object moves towards the sensor, e.g. level control (method A) the detect point can be taught

Technical data

blind zone	20 mm	50 mm	30 mm	64 mm	120 mm

reproducibility	± 0.15 %	± 0.15 %	± 0.15 %	± 0.15 %	± 0.15 %
detection zones for different objects: The dark grey areas are determined with a thin round bar (10 mm dia.) and indicate the typical operating range of a sensor. In order to obtain the light grey areas, a plate (100 x 100 mm) is introduced into the beam spread from the side. In doing so, the optimum angle between plate and sensor is always employed. This therefore indicates the maximum detection zone of the sensor. It is not possible to evaluate ultrasonic reflections outside this area.

to the actual distance at which the sensor has to switch the output. If the object to be sensed moves into the detection area from the side (method B), the switching distance should be set 8-10 % further than the desired switch point to obtain a reliable object detection, see fig. 5.

Fig. 5: Set the detect point for different directions of movement of the object

- In the »Two-way reflective barrier« operating mode, the object has to be within the range of 0-85 % of the set distance.
- If the push-button is not pressed for 10 minutes during the Teach-in setting, the settings made hitherto are deleted.
- The sensor can be reset to its factory setting.
