

Product Description

- The ICS-sensor offers a non-contact measurement of the distance to an object that has to be present within the sensor's detection zone. Depending on the set window limits, a distance-proportional analogue signal is output.
- The sensor automatically detects the load put to the analogue output and switches to current output or voltage output respectively.
- You can choose between rising and falling output characteristics.
- Three-colour LEDs indicate the operation conditions.
- The sensor can be set via Teach-in procedure.

- Optionally all Teach-in and additional sensor parameter settings can be made using the LinkControl adapter (optional accessory) and the LinkControl software for Windows®.

Safety Notes

- Read the operating manual prior to start-up.
- Connection, installation and adjustment works should be carried out by expert personnel only.
- No safety component in accordance with the EU Machine Directive, use in the area of personal and machine protection not permitted

Proper Use

ICS ultrasonic sensors are used for non-contact detection of objects.

The ICS-sensors have a **blind zone** in which distance measurement is not possible. The **operating range** indicates the distance of the sensor that can be applied with normal reflectors with sufficient function reserve. When using good reflectors, such as a calm water surface, the sensor can also be used up to its **maximum range**. Objects that strongly absorb (e.g. plastic foam) or diffusely reflect sound (e.g. pebble stones) can also reduce the defined operating range.

Installation

- Mount the sensor at the place of fitting.
- Connect a connection cable to the M12 device plug, see Fig. 1.

Pin	Signal	Colour
1	+U _B	brown
3	-U _B	blue
4	-	black
2	I/U	white
5	Com	grey

Fig. 1: Pin assignment with view onto sensor plug and colour coding of the microsonic connection cables

Model	Blind Zone	Operating Range
ICS-25...	>0.25 m	>1.30 m
ICS-35...	>0.35 m	>2.50 m
ICS-130...	>1.10 m	>8.00 m

Fig. 2: Assembly distances

Operating Manual Ultrasonic sensors with one analogue output

- ICS-25/IU/QP
- ICS-35/IU/QP
- ICS-130/IU/QP

Assembly distances

The assembly distances shown in Fig. 2 for two or more sensors should not be fallen below in order to avoid mutual interference.

Start-Up

- Connect the power supply.
- Set the sensor parameters using the Teach-in procedure, see Diagram 1.

Factory Setting

- ICS-sensors are delivered factory made with the following settings:
- Rising analogue characteristic
- Window limits for the analogue output set to blind zone and operating range
- Measurement range set to maximum range

Maintenance

Microsonic sensors are maintenance-free. In case of excess caked-on dirt we recommend to clean the white sensor surface.

Notes

- ICS-sensors have internal temperature compensation. Because the sensors heat up on their own, the temperature compensation reaches its optimum working point after approx. 30 minutes of operation.
- The load put to the analogue output is detected automatically when turning power supply on (the load must be connected to the analogue output before turning power supply on).
- If an object is within the set window limits of the analogue output, then LED D1 lights up green, if the object is outside the window limits, then LED D1 lights up red.
- If no signal is generated at the Com input for 20 seconds during the Teach-in procedure, the settings made up to that point are stored and the sensor returns to normal operating mode.
- The sensor can be reset to its factory setting (see Diagram 1).

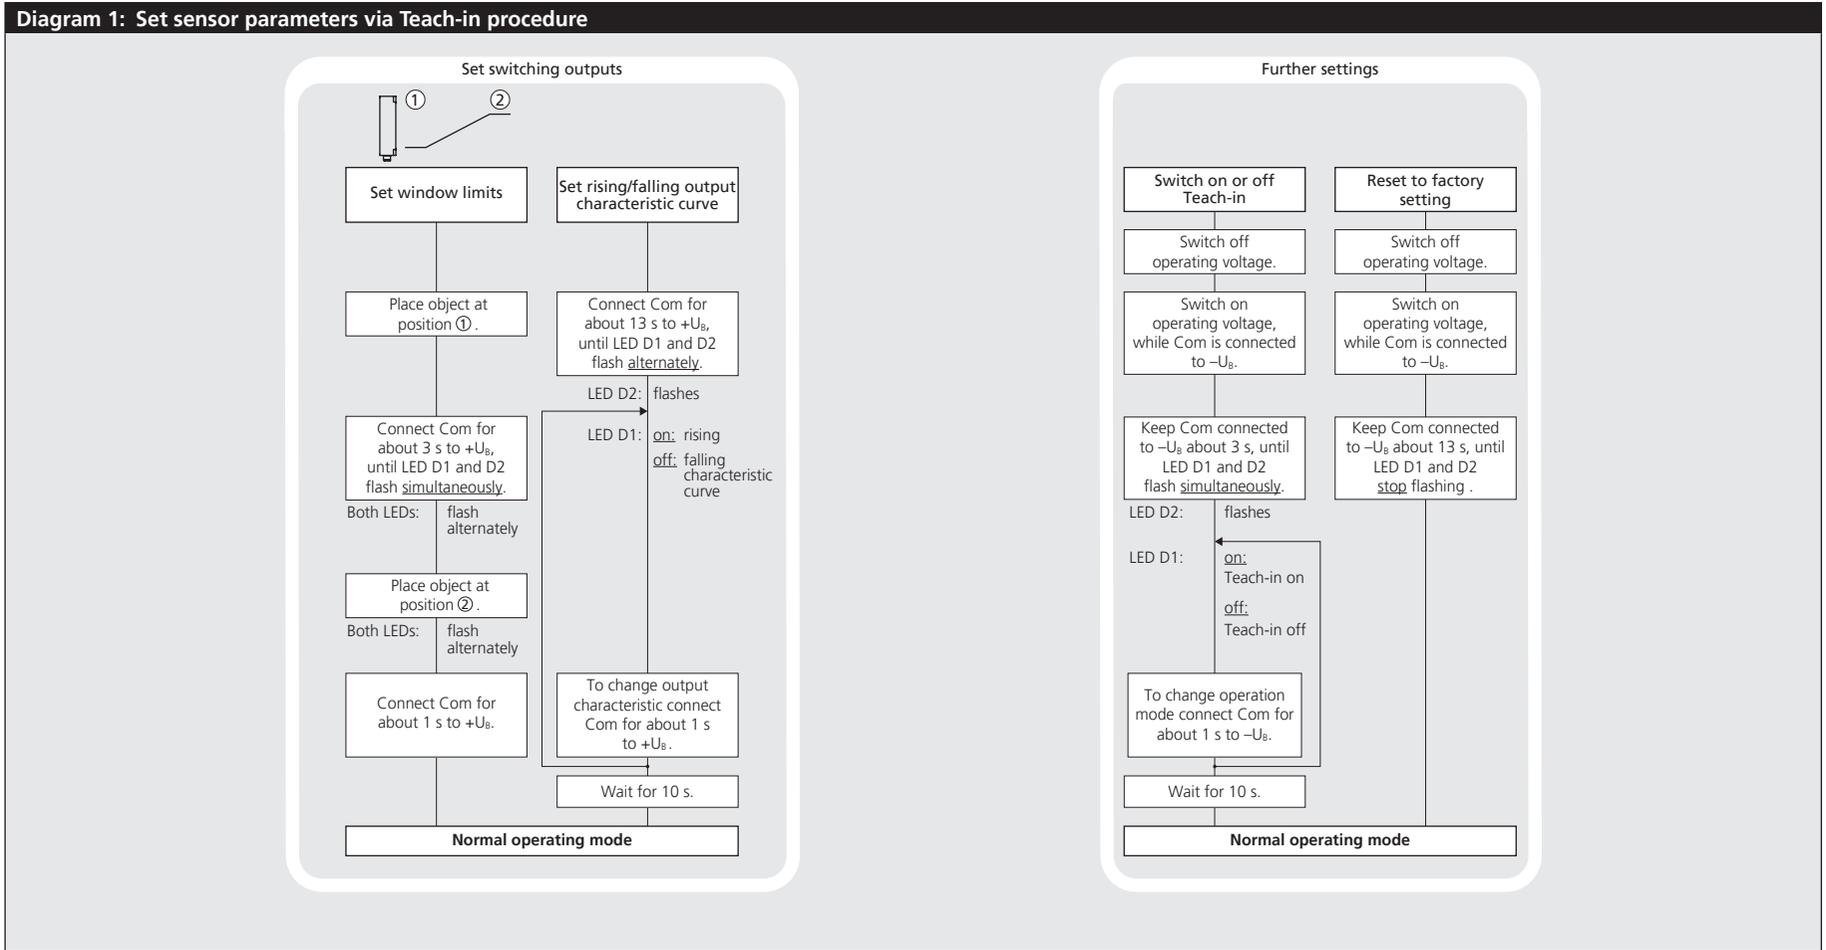

Diagram 2: Optional setting of parameters using the LinkControl Adapter LCA-2 (Offline programming)

Offline programming

- Load sensor parameters in the LinkControl Adapter LCA-2.
- Change parameters and additional functions as described here.
- Write changed parameters back into the lcs sensor.
- Refer to the quick reference guide on the LCA-2.

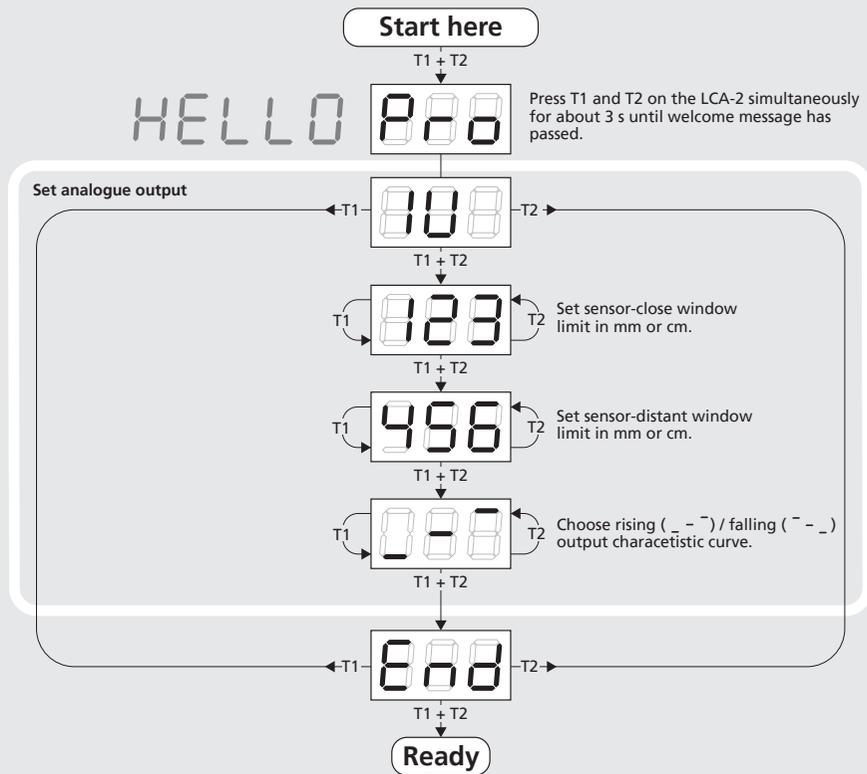

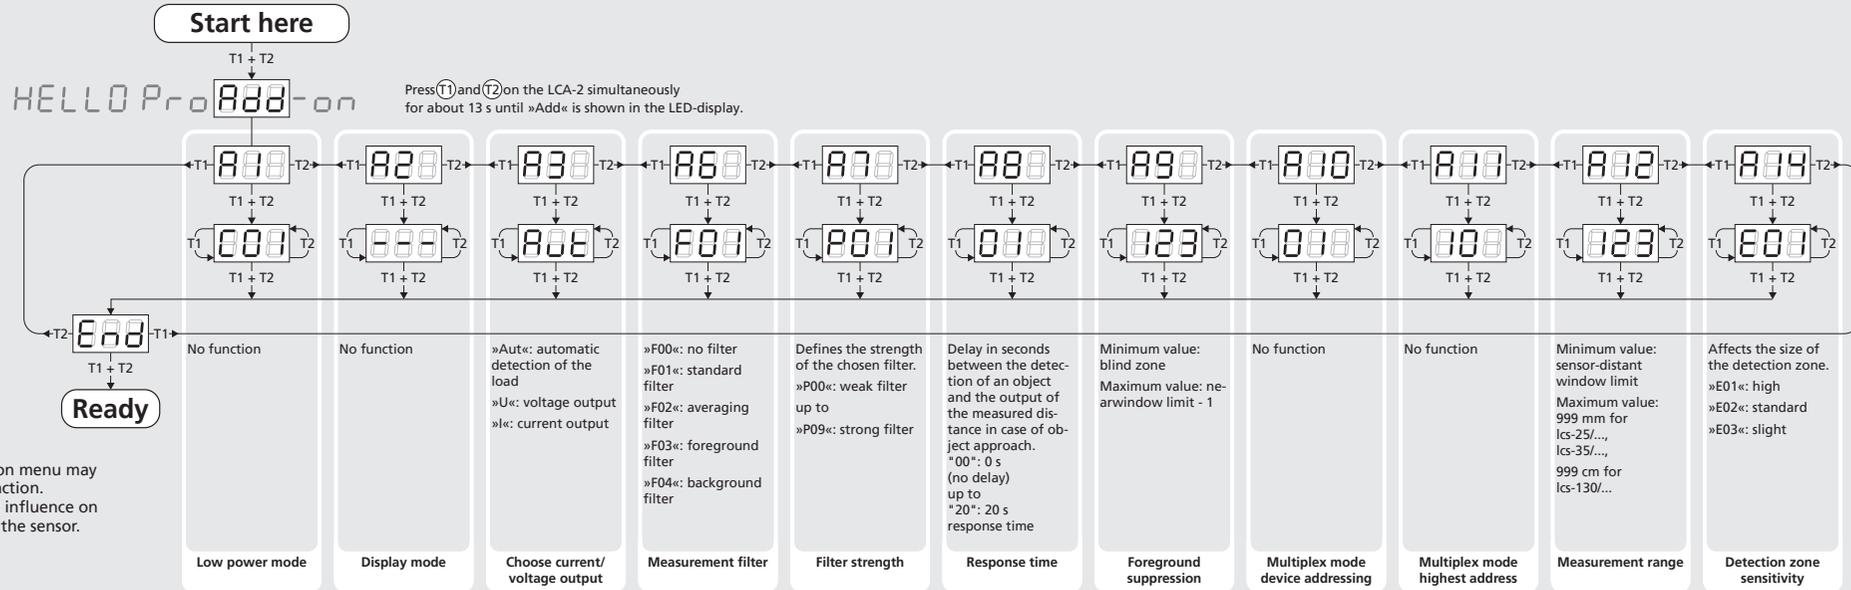

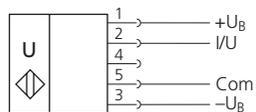

Diagram 3: Useful additional functions in Add-on menu (for experienced users only, settings not required for standard applications)

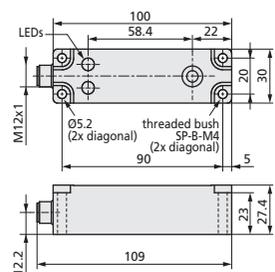

Note
Changes in the Add-on menu may impair the sensor function. A6, A7, A8, A12 have influence on the response time of the sensor.

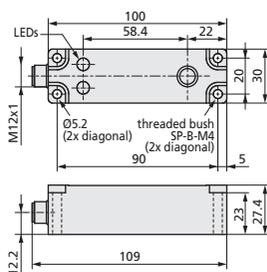

Technical data

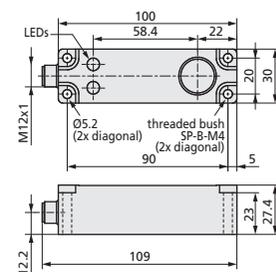

lcs-25...

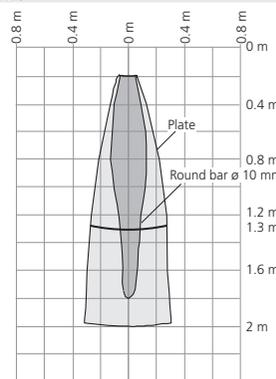

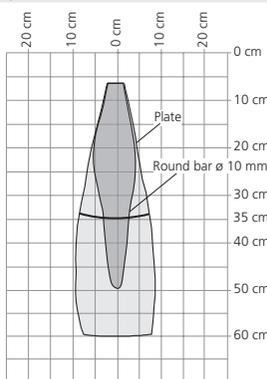

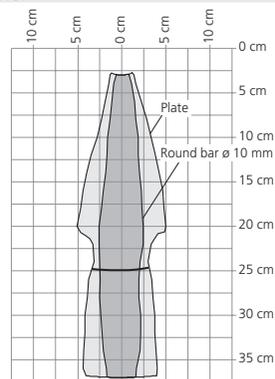

lcs-35...

lcs-130...

blind zone: 0 to 30 mm
operating range: 250 mm
maximum range: 350 mm
angle of beam spread: see detection zone
transducer frequency: 320 kHz
resolution: 0.18 mm
reproducibility: ±0.15 %
detection zones
 for different objects:
 The dark grey areas represent the zone where it is easy to recognise the normal reflector (round bar). This indicates the typical operating range of the sensors. The light grey areas represent the zone where a very large reflector – for instance a plate – can still be recognised. The requirement here is for an optimum alignment to the sensor. It is not possible to evaluate ultrasonic reflections outside this area.
