Detecting obstacles for AGVs

Ultrasonic sensors of the mic+ range enable the contactless protection of automated guided vehicles (AGs) in the driving direction. In restricted installation spaces, the compact pico+ ultrasonic sensors can be used as an alternative.

When using several sensors these can be synchronised with each other to avoid influencing each other. With a pre-alarm zone and a stopping zone, the industrial vehicle can be halted smoothly before an obstacle without the impact bumper triggering the braking mechanis

SENSORS FOR THIS APPLICATION AREA

mic+130/DIU/TC
operating range: 200 - 2.000 mm
housing: cylindrical M30
outputs: 1 x pnp + 1 x analogue 4-20 mA / 0-10 V

mic+340/DIU/TC
operating range: 350 - 5.000 mm
housing: cylindrical M30
outputs: 1 x pnp + 1 x analogue 4-20 mA / 0-10 V

pico+100/I
operating range: 120 - 1.300 mm
housing: cylindrical M18
outputs: 1 x analogue 4-20 mA

pico+100/U
operating range: 120 - 1.300 mm
housing: cylindrical M18
outputs: 1 x analogue 0-10 V
